

Laboratory Filtration Products

turning science **into solutions**

Filtration and ultrafiltration are essential process steps in nearly all environmental, chemistry and bioscientific laboratory applications.

Sartorius supplies a wide range of individual filter papers, microporous membranes, filtration devices, ultrafiltration units and protein purification devices to suit these applications. This catalog provides a condensed overview of the Sartorius Lab Filtration product range. Please contact us directly for specialty catalogs – available for in-depth technical information.

- 64 Adenovirus Purification with AdenoPACK Kits
- 66 Lentivirus Purification with LentiSELECT Kit

Ultrafiltration is a convective process using anisotropic semi-permeable membranes to separate macromolecular species and solvents – primarily on the basis of size. By allowing solvents and salts to pass the ultrafiltration membrane while macromolecules are hindered to pass it, they are being concentrated. However, ultrafiltration can also be applied in solvent exchange applications. Multiple concentration and refilling steps will progressively lead to a buffer exchange, replacing lengthy techniques like dialysis. Although ultrafiltration is not a standard method for separating and fractionating macromolecules, it can be used as such if the macromolecules differ at least 10 times in size. Ultrafiltration is a gentle, non-denaturing method that is more efficient and flexible than other processes.

Ultrafiltration Methods

Sartorius offers you a comprehensive range of ultrafiltration process methods for the concentration of your biological samples.

- Centrifugal Concentration
(100 µl to 100 mL Starting Volume)
- Pressure Ultrafiltration
(5 mL to 250 mL Starting Volume)
- Crossflow (Tangential Flow)
(100 mL to 5L Starting Volumes)
- Static Absorption
(3 mL to 20 mL Starting Volume)

Further information about the operational methods can be found on page 8.

Typical Applications for Ultrafiltration

- Concentration | desalting of proteins, enzymes, DNA, monoclonal antibodies, immunoglobulins, viruses and nanoparticles
- Bence Jones Protein concentration from urine samples prior to capillary electrophoresis
- Forensic DNA sample concentration prior to sequencing reaction
- Peptide fractionation in FASP (filter-aided sample preparation)
- Free drug | hormone assays
- Removal of primers from PCR amplified DNA
- Removal of labeled amino acids and nucleotides
- Deproteinization of samples
- General purpose laboratory concentration and desalting of proteins, enzymes, DNA, biomolecules, viruses, antibodies and immunoglobulins

Membrane Performance Characteristics

Sartorius offers an extended range of membranes to cover the great majority of ultrafiltration requirements.

- Polyethersulfone (PES)
- Cellulose Triacetate (CTA)
- Hydrosart®

Further information about the properties of the different membrane types can be found on page 9.

Process Optimization

When the highest recoveries are crucial, particularly with solute quantities in the microgram range, Sartorius recommends considering the following tips for optimal ultrafiltration results:

- Select the lowest MWCO membrane that suits your application. For the highest recovery, choose a membrane MWCO which is at least half of the molecular weight of the solute to be retained.
- Avoid over-concentration. The smaller the final concentrate volume, the more difficult it is to achieve complete recovery. If feasible, rinse the device with one or more drops of buffer after the first concentration cycle and then recover it again.
- Pretreat the device overnight in distilled water with a passivation solution such as 5% SDS, Tween 20 or Triton X. Rinse thoroughly before use.

■ Membrane Selection Guide

Ultrafiltration Methods

Sartorius offers you a comprehensive range of ultrafiltration process methods for the concentration of your biological samples. The guide below will help you select the most suitable device according to sample volume and available equipment, as well as your desired filtration speed and process control.

Centrifugal Concentration (100 µL to 100 mL Starting Volume)

Driven by the centrifugal force, ultrafiltration can be used to purify and concentrate proteins, macromolecules and nanoparticles. This gentle process is quick to set up and offers fast filtration speeds for most solutions. Sartorius offers seven Vivaspin®

devices and two Vivacell® and Centrisart® I for protein concentration, as well as Vivacon® devices for DNA and peptide concentration | fractionation.

Pressure Ultrafiltration (5 mL to 250 mL Starting Volume)

Pressurized air or inert gas provide the filtration vector for pressure filtration. To speed up the filtration process, pressurized Vivacell® products can be placed on an orbital laboratory shaker. Agitation helps to prevent membrane blocking and ensures high filtration speed. Vivaspin® 20, Vivacell® 70, Vivacell® 100 and Vivacell® 250 can be run with gas pressure. Pressure-fugation is a unique Sartorius method combining gas

pressure with centrifugation. This is the fastest of all methods, providing process times that are typically 30 to 50 percent faster than centrifugation. You can use Vivaspin® 20 and Vivacell® 70 for pressure-fugation (5 to 50 mL starting volumes).

Crossflow (Tangential Flow) (100 mL to 5 L Starting Volumes)

The sample is pumped across an ultrafiltration membrane and then returned to the original reservoir by building up pressure at the outlet of the device. The solution is progressively concentrated as solvent and micromolecules pass

through the membrane into a separate filtrate vessel. Reusable Vivaflow® 50R and Vivaflow® 200, as well as disposable Vivaflow® 50, are offered for your dedicated laboratory crossflow filtration.

Static Absorption (3 mL to 20 mL Starting Volume)

This technique uses an absorbent cellulose pad mounted behind the ultrafiltration membrane to draw solvents and micro-molecules through the membrane. The retained macromolecules thus concentrate at the bottom of the sample container.

No additional equipment is needed. These devices are ideal for clinical applications like urine concentration prior to further analysis. Both Vivapore® 5 and Vivapore® 20 offer this procedure.

Membrane Performance Characteristics

Sartorius offers an extended range of membranes to cover the great majority of ultrafiltration requirements. To select the most appropriate membranes for your application please refer to the following guide. Please note however that membrane behavior and ultimate performance, largely depends on the specific characteristics of the solution being processed. Where available alternatives membranes should be tested to optimize the process performance.

Polyethersulfone (PES)

Concentration | desalting of column eluates, cell culture supernatants, etc. This is a general purpose membrane that provides excellent performance with most solutions when retentate recovery is of primary importance. Polyethersulfone membranes are usually preferred for their low fouling characteristics, exceptional flux and broad pH range.

Cellulose Triacetate (CTA)

Free | bound drug studies and whenever the filtrate is being analyzed High hydrophilicity and very low non-specific binding characterize this membrane. Cast without any membrane support that could trap or

bind passing micro solutes, these membranes are preferred for sample cleaning and protein removal and when high recovery of the filtrate solution is of primary importance.

Hydrosart®

Concentration | desalting of column eluates, Hydrosart® membrane evaluation for upscaling Hydrosart® demonstrates the same properties as regenerated cellulose, but with the added benefit of enhanced performance characteristics and extremely low protein binding, making it the membrane of choice for applications such as concentration and desalting of immunoglobulin fractions.

Membrane Selection Guide

The molecular weight cut-off (MWCO) is the molecular weight of molecules (e.g. globular proteins) which are retained by the membrane to an extent of 90%. Therefore, to ensure the highest recovery, select a membrane with a MWCO that represents half the molecular weight of the solute to be retained.

Sartorius Vivaspin® ultrafiltration units are designed to concentrate protein solutions. Therefore, the membranes in the devices are tested for the retention of proteins and not the passage of proteins into the filtrate vessel. PES and Hydrosart® membranes have support structures, which might lead to some loss of protein after the passage through the membrane.

Recommended MWCO (Da):

Vivaspin® 500

100 µL to 500 µL Samples

Vivaspin® 500 µL centrifugal filter units offer a simple, one-step procedure for sample preparation. They can effectively be used in fixed-angle rotors accepting 2.2 mL centrifuge tubes.

The patented vertical membrane design and thin channel filtration chamber (US 5,647,990) minimizes membrane fouling and provides high-speed concentrations – even with particle-laden solutions.

Please use a fixed angle rotor for 2 mL reaction vials.

Specifications

Vivaspin® 2

Choice of Membranes

0.4 mL to 2 mL Samples

The Vivaspin® 2 bridges the gap between the 500 μ L and 4 mL centrifugal concentrators. This device combines the speed of the classic Vivaspin® products with low internal surface and membrane area for superior recoveries from very dilute solutions.

Also unique to the Vivaspin® 2 is the choice of directly pipetting the concentrate from the dead-stop pocket built into the bottom of the concentrator or alternatively reverse spinning into the concentrate recovery cap. Both methods result in nearly total concentrate recoveries.

Available with a choice of PES, Cellulose Triacetate and Hydrosart® membranes, Vivaspin® 2 offers the highest flexibility for process optimization.

Ordering Tips

- Choose a membrane pore size at least 50% smaller than the size of the molecule to be retained.
- It is usually best to select polyethersulfone membranes to achieve the fastest concentrations.
- Usually choose cellulose triacetate for protein removal or ultrafiltrate recovery.
- Usually choose Hydrosart[®] membranes for the highest recovery with Ig fractions.

■ Centrisart® I

Centrisart® I* is a ready-to-use unit for small-volume, centrifugal ultrafiltration to separate proteins from low molecular weight substances in biological samples.

Centrisart® I features a unique design that enables ultrafiltration in the direction opposite to centrifugal force. This is so effective in preventing premature blockage of the filter that even whole blood samples can be deproteinized.

The ultrafiltrate is collected in the floater insert tube, where it is readily accessible without removing the tube.

Centrisart® I is ideal for the following applications:

- Drug binding studies
- Determination of metabolites in serum
- Protein removal from blood samples
- Cleaning of liposomes
- Virus removal

□ Specifications

Centrisart® I

Concentrator capacity	Swing-bucket rotor Fixed-angle rotor	2.5 mL 2.5 mL
Dimensions	Total length Width Active membrane area Hold-up volume of membrane Dead-stop volume	93 mm 14 mm 0.79 cm ² < 5 µL 100 µL

Vivaspin® Turbo 4

2 mL to 4 mL Samples

Vivaspin® Turbo 4 is the newest member of the ultrafiltration family and allows the fastest sample concentration with the highest recoveries.

This device can handle up to 4 mL sample volumes in swing-bucket rotors and in fixed-angle rotors that accept 15 mL centrifuge tubes.

The Vivaspin® Turbo 4 optimized design and sleek internal profile ensure maximum process speeds all the way down to the last few microliters, resulting in more than 100-fold concentration.

The UV joining technology ensures smooth joint transition between the membrane and the plastic housing – allowing removal of the entire sample concentrated in the unique, pipette-friendly dead-stop pocket.

Vivaspin® 6

2 mL to 6 mL Samples

Vivaspin® 6 mL concentrators have been developed to offer increased volume flexibility and performance.

Vivaspin® 6 can process an impressive 6 mL in either swing-bucket or fixed-angle rotors accepting standard 15 mL conical bottom test tubes.

The Vivaspin® 6 features twin vertical membranes for unparalleled filtration speeds and 100× plus concentrations. The remaining volume is easy to read off the printed scale on the side of the concentrator and the modified dead-stop pocket further simplifies direct pipette recovery of the final concentrate.

Vivaspin® 15R

4 to 15 mL Samples

Vivaspin® 15R is designed for the volume segment of 2 to 15 mL and features a modified regenerated cellulose membrane; Hydrosart®. This membrane is ideal where extremely high recovery with very low adsorption is needed. Examples of these applications include desalting and concentration of Ig fractions.

Advantages

- Ultimate recovery with low adsorption (95-98%)
- Exceptionally fast concentration time (30× in 15 min.)
- Convenient application protocol with easy handling
- Easy scale-up to Vivaflow 200 with Hydrosart® membrane for volumes up to 5 liters
- Very low hold-up volume (< 20 µL)

Vivaspin® Turbo 15

4 to 15 mL Samples

Vivaspin® Turbo 15 enables the fastest sample concentration with the highest recoveries. This device can handle a sample volume of up to 15 mL in swing-bucket rotors and of up to 11 mL in fixed-angle rotors that accept 50 mL centrifuge tubes.

The UV joining technology ensures smooth joint transition between the membrane and the plastic housing – allowing removal of the entire sample concentrated in the unique, pipette-friendly dead-stop pocket.

The optimized design and sleek internal profile of the Vivaspin® Turbo 15 ensure maximum process speeds all the way down to the last few microliters, which results in more than 100-fold concentration.

Vivaspin® 20

5 to 20 mL Samples

Vivaspin® 20 mL centrifugal concentrators have been developed to offer increased volume flexibility and performance.

Vivaspin® 20 handles up to 20 mL in swing-bucket centrifuges and 14 mL in 25° fixed-angle rotors that accept 50 mL centrifuge tubes.

Featuring twin vertical membranes for unparalleled filtration speeds, the Vivaspin® 20 can achieve 100x plus concentrations.

The remaining volume is easy to read off the printed scale on the side of the concentrator and the modified dead-stop pocket further simplifies direct pipette recovery of the final concentrate.

Air pressure controller, VCA002

More Process Flexibility

Vivaspin® 20 is available with unique accessories and operating methods that are designed to provide more process flexibility and further time savings.

Gas Pressure Filtration

When an appropriate centrifuge is unavailable or for single sample processing, Vivaspin® 20 can be filled with up to 15 mL and then pressurized for bench-top concentration. For even faster processing, gas pressure can be combined with centrifugal force. "Pressure-fugation" is particularly suitable for difficult or viscous samples, such as serum, or for use of a low process temperature, which reduces filtration speed, and generally when minimum process time is essential.

■ Vivaclear Centrifugal Filters

Vivaclear centrifugal filters are disposable microfiltration devices for the fast and reliable clarification/filtration of biological samples in the range 100 µL to 500 µL. They can be used in fixed-angle rotors accepting 2.2 mL centrifuge tubes.

Product Features

- High-flux polyethersulfone membrane
- 0.8 µm pore size
- Low hold-up volume (<5 µL)
- Fast and reproducible performance

Applications

- Clarification of samples before loading in Vivapure® protein purification spin columns
- Removal of particles and precipitates
- Filtration of plasma and serum
- Filtration of cells or cell debris

Vivacell 70

10 mL to 70 mL Samples

Vivacell 70 combines the ease of use of centrifugal devices with the flexibility and control provided by pressurized ultrafiltration cells. Vivacell 70 is inexpensive, quick and easy to assemble, requires no tubing connections or stirring mechanisms and can be adapted to equipment availability or to specific user preferences.

Air pressure controller, VCA002

For convenience, simply spin in a large capacity centrifuge (rotors accepting 250 mL bottles). For the highest speeds, particularly with difficult samples, pressurize the device with air or inert gas before centrifuging.

For more process control or for single samples, combine gas pressure with a gentle orbital shake, or you can even pressurize and then leave standing on a bench top or in a refrigerator for the highest simplicity with minimum equipment requirements.

The longitudinal membrane inhibits fouling, while the built-in dead stop will hinder further concentration when the residual volume drops below 150 μ L.

Centrifuge

use with cap VCA004 when used in a fixed angle rotor

- Process convenience
- Low shear, no foaming
- Less visual control

Pressure

use with pressure head VCA700

- Simplicity and highest process control
- Ideal for refrigerated use
- Slower concentrations

Pressure-Shake

- Speed and process control
- Ideal for single samples
- If left unattended can concentrate to dryness

Pressure-Fuge

- Fastest processing
- Ideal with low MWCO or with difficult solutions
- Less visual control

Vivacell 100

20 mL to 100 mL Samples

Vivacell 100 is the latest member of the Vivacell family and bridges the volume range between the Vivacell 70 and the Vivacell 250.

The patented vertical membrane design ensures the highest performance and unmatched flexibility.

Air pressure controller, VCA002

Patented vertical membrane design

Filtrate container fits standard 250 mL rotors

Vivacell 100 Utilizes:

- Pressure
- Centrifuge
- Pressure-shake

Like the smaller Vivacell 70 unit, Vivacell 100, when used as a centrifugal device, fits only into rotors that accept 250 mL bottles.

Vivacell 100 is a unique and innovative concentrator for volumes from 20 mL to 100 mL, and utilizes pressure, centrifuge or pressure-shake to rapidly concentrate even samples with very high-particle loading.

Vivacell 100 is designed for centrifugal concentration of samples up to 100 mL, which makes it the largest centrifugal unit available. At the same time, its new design allows for maximum centrifugal force of $2,000 \times g$ to be used for even faster concentration.

Vivacell 100 units can also be used for single or extremely sensitive samples in the pressurized mode only and left on a bench or placed on a swing-bucket laboratory shaker for faster concentration. It can also be kept in a pressurized mode in the refrigerator. Handling is facilitated by the use of quick connectors. In whichever mode Vivacell 100 is used, the vertical membrane design inhibits membrane fouling, while the built-in dead stop impedes concentration to dryness and loss of sample.

Vivacell 250

Vivacell 250
Polyethersulfone Inserts

50 mL to 250 mL Samples

The Vivacell 250 is a totally new concept for the concentration of relatively high-volume biological samples. This product offers numerous advantages when compared to stirred cells.

- One size handles a volume range from under 50 mL to 250 mL.
- Use free standing on a bench top or in a refrigerator for maximum simplicity, or use a laboratory shaker for fastest concentrations.
- The unique, conical dead stop built into the bottom of the membrane insert allows concentrations to under 1 mL.

- The gentle vortex action controls membrane polarization, while greatly reducing the shear effects that are typical of stirring mechanisms.
- Setup or membrane replacement takes just a few seconds. Quick-connect fittings and a simple screw closure further enhance ease of use.

This unequaled membrane module takes only seconds to replace. The concentration process can be easily monitored through the graduated inspection window.

Vivaflow® 50

100 mL to 3 L Samples

The unique, patented Vivaflow® 50 system provides ease of use, performance, flexibility and economy that are unrivaled by any laboratory or pilot-scale filtration system on the market.

Flip-flow recirculation path

Unique Features

- The thin-channel, flip-flow recirculation path provides high crossflow velocities with minimum pump requirements
- No need for pressure holders
- Crystal clear for simple checking of remaining hold-up volume and membrane status
- Unique interlocking modules with series connectors for easy scale up
- Disposable

Unique Performance

- A single 50 cm² module will typically reduce 500 mL to less than 15 mL in under 50 minutes
- Less than 10 mL minimum system recirculation for the highest concentrations
- Less than 500 µL non-recoverable hold-up volume
- Nearly total recoveries achievable with a single 10 mL rinse

Unique "flip-flow" thin channel flow path results in high turbulence and linear velocity for exceptional flux even at high concentrations

Vivaflow® 50R

Vivaflow® 50R – Single module

Vivaflow® 50R – Two modules

100 mL to 1 L Samples

Concentrate 100 mL to under 20 mL in just a few minutes or concentrate one liter 50 times in less than 60 minutes. Alternatively, speed up your process by using two Vivaflow® 50R units in parallel and concentrate 1 liters in under 30 min.

Vivaflow® 50R is a plug-and-play laboratory crossflow cassette for concentrating up to 1 L aqueous samples. The active membrane area per device is 50 cm².

One unit comes with all the necessary accessories for running the device with a laboratory pump and a size 16 pump head. For speeding up concentration, two cassettes can be run simultaneously.

- Fast and easy protein sample concentration
- Reusable
- Concentrates volumes from 0.1 L to 1 L
- Optimal for concentration of culture supernatants and viruses
- The most compact crossflow cassette with a premium Hydrosart® membrane

Vivaflow® 200

500 mL to 5 L Samples

Concentrate 250 mL to under 20 mL in just a few minutes or concentrate one liter 50 times in less than 30 minutes. Alternatively, use two Vivaflow® 200 units in parallel and concentrate 5 liters in under 75 minutes.

Nearly total sample recoveries can be expected with most solutions.

The standard economy package comes complete with tubing, pressure indicator, flow restrictor and high-pressure pump tubing. All you need is a peristaltic pump capable of handling 6.4 mm OD (size 16) tubing. Should your pump head require larger tubing, just use the interconnecter provided to attach your own peristaltic tubing to this standard product.

Two modules in parallel will concentrate 5 liters in under 75 minutes

Vivapore® Solvent Absorption Concentrators

3 mL to 20 mL Samples

With no need for additional equipment, pressure or vacuum, solvent absorption is the most economic and user-friendly concentration technique available to the clinician and research scientist.

Just fill the unit with the solution to be concentrated, wait for the desired concentration level to be achieved and then pipette the concentrated sample from the bottom of the reservoir.

Vivapore® 5

Vivapore® 10|20

Vivapore®* is ideal for general-purpose laboratory concentration and purification prior to further analysis. It is particularly suited for labile solutions that can denature with alternative shear- or pressure-inducing methods or that require processing in a cold room environment.

Vivapore® concentrators extend the solvent absorption technique to a totally new level of performance, application potential and ease of use.

Ultrafiltration Membrane Filters

PES 146, CTA 145 and Hydrosart® 144

Polyethersulfone (PES)

This is a general purpose membrane that provides excellent performance with most solutions when retentate recovery is of primary importance. Polyethersulfone membranes exhibit no hydrophobic or hydrophilic interactions and are usually preferred for their low fouling characteristics, exceptional flux and broad pH range.

Cellulose Triacetate (CTA)

High hydrophilicity and exceptionally low non-specific binding characterize this membrane. Cast without any membrane

support that could trap or bind passing microsolute, these membranes are to be ideal for sample cleaning and protein removal and when high recovery of the filtrate solution is of primary importance.

Hydrosart®

These membranes are also highly hydrophilic and are often preferred for their high protein recovery when processing very dilute solutions. Resistance to autoclaving, ease of cleaning and extended chemical resistance also characterize this type of membrane.

Specifications

Typical Performance for Polyethersulfone, Type 146

Thickness	120 µm
pH range	1–14
Water flux	MWCO 10,000
Protein retention	Cytochrome C

Specifications for Cellulose Triacetate, Type 145

Vivacon® 500

For DNA Sample Desalting and Concentration

Reproducible DNA and Protein Sample Desalting and Concentration

Vivacon® 500 centrifugal concentrators offer the optimal solution for DNA and protein concentration and buffer exchange applications. For optimal performance with highly dilute samples, e.g. forensic samples, Vivacon® 500 incorporates the patented regenerated cellulose membrane Hydrosart®.

High recoveries and excellent reproducibilities are combined with convenience offered by the molecular weight cutoff printed on the individual Vivacon® 500 units.

As Vivacon® 500 can be respun after sample processing, this ensures complete concentrate recovery, which is especially important when working with low-sample concentrations.

Vivacon® 500-PCR Grade

To use DNA amplification technologies, any traces of DNA originating from the equipment need to be eliminated.

Vivacon® 500-PCR Grade units are treated with ethylene oxide (ETO) in a validated process to deactivate all traces of DNA that might interfere with subsequent amplification procedures.

Vivacon® 2

For DNA Sample Desalting and Concentration

Reproducible DNA Sample Desalting and Concentration

Vivacon® 2 centrifugal concentrators offer the optimal solution for DNA and protein concentration and buffer exchange applications. For optimal performance with highly dilute samples, e.g. forensic samples, Vivacon® 2 incorporates the patented regenerated cellulose membrane Hydrosart®.

High recoveries and excellent reproducibilities are combined with the convenience provided by the volume

graduation and molecular weight cutoff printed on the individual Vivacon® 2 units.

As Vivacon® 2 can be respun after sample processing, this ensures complete concentrate recovery, which is especially important when working with low-sample concentrations.

Vivacon® 2-PCR Grade

Vivacon® 2-PCR Grade units are treated with ethylene oxide (ETO) in a validated process to deactivate all traces of DNA that might interfere with subsequent amplification procedures.

Vivapure®

Ion Exchange Protein Purification Products

Chromatography gel beads (right) are shown on top of a membrane adsorber in this SEM. The membrane adsorber pores are more than 50 times larger than bead pores.

Fast and Easy-to-Use Spin Columns

Vivapure® Ion Exchange (IEX) spin columns are centrifugal devices that incorporate Sartobind® membrane adsorber technology as their chromatography matrix. Vivapure® IEX spin columns make protein purification as easy as filtration. The devices are ready to use and eliminate the risk of running dry. For many protein purification applications, they replace time-consuming and tedious column chromatography.

The rapid Vivapure® IEX 1-2-3 bind-wash-elute protocol especially lends itself to screening applications, where many different samples are processed in parallel.

The Sartobind® Membrane Adsorber Matrix

Sartobind® IEX membrane adsorbers are based on stabilized regenerated cellulose and exhibit a microporous structure with a pore size of $>3\text{ }\mu\text{m}$, which is orders of magnitude larger than conventional chromatographic gel materials. This allows molecules to be transported to the ligands immobilized on the membrane adsorber by convective flow, resulting in exceptionally high flow rates.

By contrast, gel chromatography is slowed down due to diffusion limitations, as the molecules need to enter the small bead pores in order to be bound by the ligands. The porous membrane adsorber enables fast, reproducible and scalable protein purification.

Fast and Simple-to-Use Spin Columns

- Devices are ready to use
- They make protein purification as simple as filtration

Reproducible Results

- No column packing necessary as the devices are ready to use
- Membrane adsorber spin columns cannot crack or run dry

Centrifugal Devices

- Offer the possibility of working in parallel

Low Bed Volume

- Small membrane adsorber bed volumes allow working with lower buffer amounts, resulting in concentrated elution fractions

Scalable Product Range

- Process-scale modules are available with the same Sartobind® IEX membrane adsorber matrix

Fast and easy protein purification with Vivapure® spin columns

Vivapure® Mini-400 | 500 µL
Binding capacities:
1 mg to 4 mg

Vivapure® Maxi-19 | 20 mL
Binding capacities:
15 mg to 80 mg

Vivapure® Miniprep and Maxiprep Purification Kits

For Fast Antibody and His-Tagged Protein Purification

Rapid Purification with High Yields

Vivapure® Miniprep and Maxiprep kits are spin-column-based kits for fast and effective purification of His-tagged proteins and antibodies.

Spin columns have the advantage of speed over gravity drip columns and batch protocols.

With the patented FlowGo regulator, the sample residence time is extended to assure adequate sample binding to the resin. As a result, Vivapure® Miniprep and Maxiprep spin column kits combine the merits of spin columns and gravity drip columns. This results in rapid purification with up to 95% protein recovery and purity.

All spin columns can be conveniently used in a centrifuge. For processing large sample volumes, e.g. from diluted cell culture supernatants, Vivapure® Maxiprep spin columns can additionally be run with a peristaltic pump collar (VS-PPCSC).

Vivapure® Miniprep and Maxiprep columns come in a variety of different configurations for your convenience. They can be purchased as completely ready-to-use kits with buffers and ultrafiltration devices but just as well as stand-alone spin columns in small or large packages for frequent users.

Vivapure® Virus Purification and Concentration Kits

Recombinant virus vectors are the preferred method for a wide range of gene delivery applications. Especially adenovirus type 5 and VSV-G pseudotyped lentivirus are two frequently utilized viral vectors for *in vitro* and *in vivo* applications.

Recombinant Adenovirus Vectors

Recombinant adenovirus vectors are versatile tools in research and therapeutic applications for gene transfer and protein expression in cell lines that have low transfection efficiency with liposomes. After entering cells, the virus remains epichromosomal – i.e., does not integrate into the host chromosome, leaving the host genome unaffected. The delivery of RNAi into cells is becoming a major application for adenovirus vectors.

Lentivirus Vectors

Lentivirus vectors are frequently used in gene transfer studies, due to their ability of gene transfer and integration into dividing and non-dividing cells. The pseudotyped envelope with vesicular stomatitis virus envelope G (VSV-G) protein broadens their target cell range. Lentiviral vectors have been shown to deliver genes into cell types (e.g. neurons, lymphocytes and macrophages) which other retrovirus vectors could not be used for. The lentivirus vector is increasingly used to integrate siRNA efficiently in a wide variety of cell lines and primary cells, both *in vitro* and *in vivo*.

Rapid Virus Purification by Membrane Chromatography

The Sartobind® ion exchange membrane adsorber technology used in AdenoPACK and LentiSELECT is unique in its capability to efficiently and rapidly capture and recover large virus particles. Compared with chromatography media, membrane adsorbers provide large 3,000 nm pores, allowing unrestricted access and recovery of virus from the charged adsorber surface. Convective flow through the syringe filter devices provides high-speed separations not possible with traditional chromatography, cesium chloride density gradients and ultracentrifugation methods. Sartorius membrane adsorbers with porous matrices, high capacities, low differential pressures, high flow rates and low unspecific adsorption show excellent performance in small-scale virus purification. In addition, these syringe filter devices are scalable and comply with cGMP requirements for large-volume, high-performance separation, reducing final process time ten-fold.

■ Adenovirus Purification with Vivapure® AdenoPACK Kits

AdenoPACK 20|100|500

The AdenoPACK adenovirus purification and concentration kits offer researchers who need to recover up to 3×10^{13} purified recombinant adenovirus particles for in vitro transfection a fast, safe and easy-to-use solution. The kits include all reagents and devices necessary for clarification, purification and concentration of adenovirus type 5 from HEK293 cell cultures – all within just two hours. These straightforward kits replace time-consuming and labor-intensive 48-hour CsCl density gradients.

AdenoPACK kits are offered as AdenoPACK 20, AdenoPACK 100 and AdenoPACK 500 for the purification and concentration of adenovirus type 5 from 20 mL to 500 mL cell cultures, resulting in 1×10^{11} to 3×10^{13} purified viral particles. For each sample volume, the most convenient handling method is provided for ultimate convenience.

To this end, preparations using AdenoPACK 20 are supplied in a spin column format for centrifuges. AdenoPACK 100 is a manually operated kit in a syringe filter format* and AdenoPACK 500 is a pump-driven kit.

* Vivapure® AdenoPACK 100 can be alternatively be operated with a laboratory pump or an infusion pump, for which protocols are provided on our web page at www.sartorius-stedim.com. Additionally, the tubes and adaptors needed for these operating modes can be ordered.

AdenoPACK Advantages

Fast and Easy Virus Purification

- Purification completed in just 2 hours
- Convenient, over 10× faster alternative to CsCl density gradient

Quantitative Yields

- In contrast to CsCl density gradient, the complete cell culture is used for virus purification and not only the viral pellet

Flexible Product Range

- Applicable from initial construct screening to large-scale virus production

Complete Kit

- Including filtration devices, AdenoPACK units for virus purification, Vivaspin® and all buffers

Low Endotoxin Levels

- High cell viability and infection rates due to endotoxin levels of < 0.025 EU/mL

■ Lentivirus Purification with the Vivapure® LentiSELECT Kit

LentiSELECT 40|500|1000

The LentiSELECT kits for lentivirus purification and concentration offer researchers who need to recover up to 5×10^9 infective lentivirus particles per mL for in vitro transfection or animal studies a fast and easy-to-use solution.

These straightforward kits replace time-consuming ultracentrifugation protocols, which typically take approximately one day for large sample volumes. Vivapure® LentiSELECT thus reduces purification time to just a few hours.

LentiSELECT kits are offered as LentiSELECT 40, LentiSELECT 500 and LentiSELECT 1000 for the purification and concentration of VSV-G pseudotyped lentivirus from 40 mL to 1,000 mL cell cultures, resulting in 8×10^8 to 1×10^{10} purified infective particles. The most convenient handling method is provided for each sample volume. To this end, 40 mL sample volumes are processed manually with LentiSELECT 40, while LentiSELECT 500 and 1000 are pump-driven kits.

LentiSELECT Advantages

Fast and Easy Virus Purification

- Purification completed in less than one to six hours, depending on sample volume
- Kit is as easy to use as filtration

No Need for Expensive Instruments

- Lentivirus purification with LentiSELECT is independent of equipment, such as ultracentrifuges

High Virus Purity

- Achieve pure virus based on a chromatographic method for your experiments instead of a crude and variable cell culture supernatant pellet

Optimal for Multiple Virus Construct Screening

With LentiSELECT 40, four purification runs can be conducted in parallel with one kit

Complete Kits

- Including LentiSELECT units for virus purification, Vivaspin® units for concentration| buffer exchange and all buffers and syringes necessary

Low Endotoxin Levels

- High cell viability and infection rates due to endotoxin levels of < 0.025 EU/mL

- 104 **NEW!** Sartoclear Dynamics® Lab V
- 108 Chemical Compatibility

Syringe filters are used for many routine preparation steps in laboratories all over the world. They are convenient, ready-to-use disposables for sterile filtration of liquids and removal of particles from solutions and gases. Depending on the reagents filtered, syringe filters have to fulfill certain requirements to best serve customer's application. Sartorius offers Minisart® syringe filters and filters optimized for a wide range of relatively large volumes. The filters are clean and safe as they are virtually free of leachables and extractables and reliably remove particles and microorganisms with no leakage. If you need to rely on the quality of your filtrate – whether it needs to be sterile prior to injection or particulate-free before analysis – field-proven, high-quality Sartorius filter syringes are the No. 1 choice for reliable, convenient preparation steps.

Our Product Range

Minisart® syringe filters feature a housing made of medical-grade acrylic (MBS), which makes them the perfect choice for sterile filtration and clarification of additives, buffers, reagents, drugs and gases. Their effective filtration area of 6.2 cm² for liquids is the largest among premium syringe filters. The combination of the MBS housing material and surfactant-free cellulose acetate, PES or PTFE membranes add comma provides the lowest non-specific binding. As a result, Minisart® delivers excellent performance in filtering medical drugs or gases for sterilization or particle removal prior to use.

Minisart® syringe filters with a polypropylene housing are optimized for filtration prior to analysis and withstand even harsh solvents and chemicals. Due to the typical range of volumes from less than 1 mL to 100 mL, these filters are available in three different diameters with an effective filtration area of 0.07 cm², 1.7 cm² and 4.8 cm² for the optimum filter capacity and the lowest hold-up volume.

NEW!

Sartorius has developed a new, easy-to-use and straightforward filtration setup. The manually operated Claristep® Filtration System consisting of a station and filter units offers a novel way for clarifying your samples prior to analysis.

Clarisstep® Filter units are processed without syringe and are made of the purest materials. Another major benefit is that the contact time of the samples with the filters and the caps is extremely short, ensuring optimal, contamination-free results. The Claristep® Station consists of a base, a lid and an exchangeable tray for easy and accurate positioning of sample vials and Claristep® Filter units.

Clarisstep® syringeless filter units with RC membranes are optimized for solvents and aqueous solutions. They provide maximum chemical compatibility and exceptionally low non-specific binding of analytes.

Sartolab® vacuum filtration devices with 0.1 µm and 0.22 µm PES membranes for convenient filtration of 150 mL up to 1 L are ready to use and sterile.

Sartolab® RF is a complete system that includes a receiver flask. Sartolab® BT Sterile is a bottle top filter without a receiver flasks. This enables customers to use a receiver bottle of their choice and to even expand filtration capacity, depending on the particle load of the filtered liquid by filling more than one receiver flask. Sartolab® 150V is a disposable vacuum filter with a pleated 0.22 µm PES membrane, which is suitable for up to 15 L of liquid.

Sartolab® pressure filtration devices with a 0.2 µm SFCA or PES membrane are available with or without a glass fiber prefilter, depending on your needs. Sartolab P20 is designed for up to 3 L volumes and can also be used in-line. The polycarbonate housing and membrane components are ideal for filtering liquid medical drugs. The glass fiber prefilter types are ideal for filtering environmental samples that have a high particle load prior to analyzing such samples.

Typical Applications for Filtration Devices

- Sterile filtration of liquids and gases with virtually no effect on the ingredients
- Particle removal from liquids and gases prior to downstream processes
- Venting of vials, bottles, containers, bags and bioreactors and fermenters
- Removal of precipitates and coagulates from medical solutions prior to use

■ Minisart® Syringe Filters

Removal of Particles and Microorganisms from Liquids and Gases

Sartorius offers Minisart® syringe filters for a wide range of applications. The filters are clean and safe as they are virtually free of leachables and extractables. In addition, they reliably remove particles and microorganisms – without any leakage. Minisart® with a polypropylene housing is optimized for filtration prior to analysis and withstands even harsh solvents and chemicals. Minisart® with a housing made of medical-grade acrylic (MBS) is the perfect choice for sterile filtration and clarification of additives, buffers, reagents, drugs and gases.

■ A Full Range of Filters Dedicated for Various Filtration Applications

Sample Preparation

HPLC | UHPLC | Analytics

Elimination of particles from your samples prior to HPLC or other chromatographic analysis is essential in order to maintain the integrity of your chromatography column and to maximize its operating lifetime. Minisart® syringe filters optimized for sample preparation consist of a

polypropylene housing and membrane components featuring maximum chemical compatibility and minimum extractables to ensure excellent results. Due to the typical range of volumes from less than 1 mL to 100 mL, these filters are available in three different diameters with an effective filtration area of 0.07 cm², 1.7 cm² and 4.8 cm². For a selection guide, please see page 73.

Filtration of Aqueous Liquids

Clarification | Sterile Filtration

For clarification and sterilization of liquids, filtration is the optimal method. It removes all microorganisms and particles reliably, without any effects on the ingredients due to adsorption or decomposition. For optimal results, Minisart® syringe filters with an MBS housing provide a choice of

membranes with pore sizes ranging from 0.1 µm to 5 µm for high flow rates and the lowest adsorption characteristics. The effective filtration area of 6.2 cm² for the fastest filtration is the largest among premium syringe filters available, and the MBS housing is color-coded for easy pore size identification. For a list of the types offered, please see page 77.

Medical Use and Special Sterile Venting Applications

Minisart® syringe filters are ideal for clarification of liquids laden with particles, e.g. for preparation of pharmaceuticals or infusion solutions. For sterilization and removal of particles from air and other gases, syringe filters are optimal for

sterile venting of containers, bioreactors, fermenters and tubing systems in medical devices. Many Minisart® syringe filters have the CE mark of conformity (European directive) and are available with a wide choice of membranes, connectors and housing materials. For a list of the types offered, please see page 80.

Minisart® Selection Guide

Please refer to Minisart® RC, NY or SRP for the highest chemical compatibility on page 75.

Please refer to Minisart® NML or Minisart® High Flow on page 78.

Several additional Minisart® units for venting and special purposes are shown on page 82.

Sample Preparation for Analytical Procedures

Reliable Removal of Particles and Microorganisms from Liquids and Gases

Particle removal by filtration before analysis substantially increases the lifetime of your columns. Minisart® RC is optimized for aqueous liquids and solvents and is compatible with DMSO, other amides, ketones, esters and ethers. Minisart® NY is exceptionally pure compared with other common polyamide (nylon) filters and competitor products. For this product raw materials are used which do not interfere with standard analytical methods.

Our coating-free hydrophobic PTFE membrane used in Minisart® SRP is suitable for venting applications and leachables-free clarification of exceptionally harsh chemicals.

Minisart® Features

- Low adsorption of analytes
- Maximum chemical compatibility
- Minimum extractables or leachables
- Bidirectional use possible
- 100% optical integrity test

Minisart® High Flow with PES

Minisart® NML with SFCA

■ Filtration of Aqueous Liquids – Clarification | Sterilization

Filtration Is the Optimal Method for Clarification and Sterilization of Liquids

Sterilization by filtration is the fastest method for removal of bacterial cells from liquids, while minimizing the effects on ingredients. Minisart® NML with surfactant-free cellulose acetate (SFCA) is the best choice for all aqueous solutions with a pH of 4 to 8. It combines fast flow rates with an exceptionally pure and leachables-free membrane and is available in many different pore sizes – also for the removal of larger particles. Minisart® High Flow with polyethersulfone (PES) is optimal for delivering the highest flow rates and for a broad pH compatibility range from 1 to 13. Due to the asymmetric membrane structure, the PES surface virtually behaves like a prefilter. Both Minisart® types – NML and High Flow – can be sterilized by

ethylene oxide (EO) or gamma irradiation and are suitable for gluing and assembling on tubing. In addition, Minisart® NML has the CE mark of conformity.

Minisart® Features

- The largest effective filtration area (EFA) of 6.2 cm²
- The lowest adsorption
- Superior flow rate
- High total throughput
- Low hold-up volume
- Minimum extractables
- PVC-free
- Gamma-irradiated or EO-sterilized
- Bidirectional use possible
- 100% optical integrity test

■ Special Applications – Medical Uses and Sterile Venting

Choose from a Broad Range of Pore Sizes, Materials and Formats

Bacterial cell removal or particulate removal from liquids, including medical drugs, can easily be performed with Minisart® syringe filters. Minisart® has a minimal effect on the ingredients of a filtered solution.

Minisart® NML and Ophthalsart with surfactant-free cellulose acetate (SFCA) and Minisart® HY and SRP with hydrophobic PTFE have the CE mark of conformity and are frequently used for sterile filtration of aqueous and oily ear or eye solutions and other drugs. Minisart® NML with a 5 µm pore size removes particulates or coagulates in dissolved medical drugs prior to injection, offering the highest total throughput under sterile conditions – without any early

clogging. Hydrophobic PTFE filters are suitable for venting purposes and are additionally available in special formats with activated carbon.

Minisart® Features

- 100% optical integrity test
- Low adsorption
- Minimum extractables
- Particulate-free
- PVC-free
- Gamma-irradiated or EO-sterilized
- Many CE-marked types
- Bidirectional use possible
- Many configurations available

Pressure-Hold Test

Method: Pressure-hold tests were performed by connecting pre-wetted syringe filter units to a 10-fold pressure device with a pressure gauge. The pressure applied equaled 4/5 of the bubble point. Units failed the test if they released air bubbles before reaching 4/5 of the minimum bubble point. These units were remeasured to determine at which pressure air bubbles appear.

Result: Testing the pressure-hold capability of syringe filters revealed that many competitor 3's filters are dysfunctional and not intact. Filtration performed with such filters will result in unsterile filtrates or filtrates without an appropriately reduced level of particles.

Minisart® available in many configurations

¹ Hold-up volume after air purge² Hydrophilic membranes can filter dry air or gas but become impermeable to air or gas when wetted!³ Hydrophobic membranes cannot be wetted with aqueous solutions unless you overcome their water penetration point.⁴ According to bacterial challenge test (BCT) with 10^7 Brevundimonas diminuta. All non-sterile Minisart® types listed above can be sterilized according to the method recommended in this table.

* Minisart® Air can be sterilized by gamma rays according to the following parameters: Range 25 – 40 kGy (validated with 50 kGy).

Claristep® Filtration System

The Power of Simplicity

The Claristep® Station consists of a base, a lid and an exchangeable tray for easy and accurate positioning of sample vials and Claristep® Filter units. The patent-pending design features unique grooves in the station's lid and matching guide ridges on Claristep® Filter units to enable intuitively correct alignment and convenient handling of the system.

Preparing samples by clarification is an essential step prior to nearly all analytical techniques, such as high pressure liquid chromatography (HPLC). This filtration step to eliminate particles is crucial for maintaining the integrity of chromatography columns and for maximizing their operating life time.

In addition, as the sensitivity of automated analytical instruments continues to improve, they increasingly require less volume to operate in order to maximize throughput. Therefore, fast clarification of small volumes that does not add leachables or extractables to the original sample is indispensable for achieving the best analytical results.

To meet these requirements, Sartorius has developed a new, easy-to-use and straightforward filtration setup. The manually operated Claristep® Filtration System consisting of a station and filter units offers a novel way for clarifying your samples prior to analysis.

- Up to 8 samples are processed simultaneously
- No syringe required
- No need for a vacuum source or a power supply
- For low sample volumes ranging from 60 µL to 600 µL
- Hold-up volume < 30 µL

The grooves automatically guide the filter unit caps into the correct positions for simultaneous and accurate cap closure.

Claristep® Filter units are made of the purest materials. Another major benefit is that the contact time of the samples with the filters and the caps is extremely short, ensuring optimal, contamination-free results. Filtered liquids are collected in any 12 x 32 mm outer diameter vials of your choice based on the analytical method to be performed.

Sample Preparation for Analytics

Use the Most Ergonomic Clarification Solution

Filter 8 samples simultaneously – without needing any power supply or a vacuum | pressure source. Simply place the filters on

your vials, gently close the station and press on the station lid to filter – that's it!

1. Close the station lid. The grooves align the caps automatically, securely sealing every single Claristep® Filter unit for the most convenient processing.

2. Apply slight uniform pressure with your hand to start sample clarification. You will feel a certain resistance while liquid is pressed through each membrane.

3. Press down on the station lid so that the left and right corners touch the base plate. Hold the lid in place for 3 seconds to ensure all sample liquid is filtered through.

Claristep® Filter units press liquid through each membrane by an air pocket that forms over each filter unit when the station lid is closed. This air pocket is released when you stop holding down the lid – you will feel it in your fingertips!

Before clarification, the samples are pipetted in the filter reservoir.

After clarification, the filtrates are collected in sample vials.

■ Reliable Removal of Particles

Filter Samples Without Adding Extractables and Leachables

Claristep® Filter units with RC membranes are optimized for solvents and aqueous solutions. They provide maximum chemical compatibility and exceptionally low non-specific binding of analytes.

HPLC Certification

HPLC Procedure

Column: C18: 5 μm × 250 mm × 4.0 mm, Flow Rate: 1 mL/min, Wavelength: 220 nm

Injection Volume: 20 μL, Analysis Time: 65 min, Temperature: 40°C, Mobile Phases: A) Acetonitrile | B) Water, Gradient: Hold 60% A for 10 min, 60% to 100% A in 20 min, 100% A for 30 min

Sample Preparation Techniques

Choose the Best Solution for Your Needs

Do you process dozens of samples each day? A syringeless solution will help you reduce time, effort and waste – and minimize hand stress. If you need to analyze only a few samples a day, you will benefit from our proven combination of a syringe and syringe filter. The choice is all yours!

12 x 32 mm sample vials

Additional Components Needed

The free choice of 12 x 32 mm sample vials and lids is enabling you to choose the right vial for your particular sample and application, e.g. for light sensitive substances you can use brown glass. For small sample volumes you can use vessels with inlays. You can use glass or plastic, screw caps and/or slide lids – whatever you prefer.

■ Sartolab® P20 and Sartolab® P20 Plus

Sterile Filtration of Sample Volumes of Up to 5 Liters

Using Sartolab® P20 or Sartolab® P20 Plus in Available Systems

Systems with Luer Lock Connectors

Sartolab® units with a luer lock inlet fit directly onto the corresponding connectors of tubing from peristaltic pumps. This configuration can also be used with luer lock syringes.

Systems with Tubing

If the liquid to be filtered will be pumped through open tubing from a pressure tank or a peristaltic pump, then a Sartolab® unit with a hose nipple inlet is required. The stepwise increase in diameter of the nipple, from 6 mm to 12 mm, makes it suitable for a wide range of tubing.

Application

The Sartolab® P20 is a ready-to-use pressure filtration unit for sterile filtration of media and aqueous solutions in batches ranging from 100 mL to 5 L. For media that contain sera and difficult-to-filter solutions, a Sartolab® P20 Plus unit with an incorporated prefilter is also available.

Security

The effectiveness of every batch of 0.2 µm cellulose acetate membranes for sterile filtration is confirmed by bacteria challenge tests (HIMA) using *Brevundimonas diminuta*. Only biosafe

material is used in the filtration units; they have been proven non-toxic by passing the USP plastics test for toxicity. Tests with MRC-5 human lung cells on cellulose acetate membranes and glass fiber prefilters showed no cytotoxic effects. Finished units are also tested for their sterile filtration capability and for housing and membrane integrity.

Fast Filtration

The combination of a large filtration area (20 cm²) and the optimal design of the filter support guarantees high flow rates with high total throughputs. Automatic venting of any trapped air through the PTFE membrane-protected vent ports ensures that the entire filter surface is used for effective filtration.

Sartolab® 150v

Disposable PES Vacuum Filtration Unit for Volumes of Up to 15 Liters

Description

Sartolab® 150v is a disposable, sterile, ready-to-use membrane filter capsule for highest convenience. Sartolab® 150v capsules are made of a unique hydrophilic polyethersulfone (PES) membrane providing outstanding total throughput, flow rate performance, low extractables and broadest chemical compatibility.

Applications

Typical applications include sterilizing-grade filtration of:

- Biological fluids
- Purified water
- Media
- Buffers

Compatibility

The PES membrane is compatible with a pH range from 1 to 14, making Sartolab® 150v ideal for filtration of solutions with either high or low pH values.

Microbiological Retention

Sartolab® 150v capsules rated to 0.2 µm are fully validated as sterilizing-grade filters according to HIMA and ASTM F-838-05 guidelines.

Quality Control

Each individual element is integrity tested by the bubble point and diffusion test methods before final assembly. Sartolab® 150v capsules are designed, developed and manufactured in accordance with a ISO 9001:2000 certified quality management system.

Performance

The unique pleated filter construction, combined with the highly asymmetric pore structure of the PES membrane, provides excellent flow rates and superior total throughput performance, especially in comparison to conventional disc filter systems.

□ Specifications

Easy to Use

Place Sartolab® 150v on the bottle neck. Vacuum is automatically created when used with a water jet pump or a different vacuum source.

Create vacuum to start filtration.

To fill multiple receiving bottles, break the vacuum by opening the valve on top of the Sartolab® 150v housing.

To continue filtration with the next receiving bottle, close the valve.

Sartolab® RF | BT

Disposable Filter Systems and Bottle-Top Filters

Sartolab® single-use sterile filter systems and bottle-top filters are designed for the vacuum filtration of tissue culture media and components, biological fluids, and other aqueous solutions.

The Sartolab® single-use 150 mL, 250 mL, 500 mL and 1,000 mL bottles are designed as storage containers for sterile media, buffers, or other aqueous solutions.

These products are for laboratory use only and not for human parenteral applications.

Materials

The filter funnels, dust covers and receiver bottles are manufactured from virgin, heavy metal-free polystyrene. The tubing adapters, filter adapters, and the plug seal caps are made of heavy metal-free polyethylene. Sartolab® filter systems are available with polyethersulfone membranes. All units are sterilized by gamma irradiation.

Performance

The filter units contain membranes integrally sealed to a support grid designed to maximize flow and reduce foaming and protein denaturation.

The membranes are compatible with most aqueous solutions and tested for use in cell culture applications.

Filter Systems

The filter adapter utilizes a gasket design to ensure a vacuum-tight seal on the receiver | storage bottle. Each filter unit also contains a convenient tubing adapter that will fit most vacuum hoses.

The bottles are single-use containers. They cannot withstand autoclaving or use at temperatures greater than 70°C. The suitability of the bottles for storage of solutions below 0°C depends both on the solution and the storage conditions. Many aqueous solutions, including culture media, have been successfully frozen and stored at temperatures down to -20°C. However, a trial run under actual conditions is strongly recommended to test the suitability of the bottles for frozen storage.

□ Specifications

Pore Size	Membrane Material	Characteristics
0.22 µm	Polyethersulfone	Very low protein binding and low extractables, fast flow rate
0.45 µm	Cellulose Acetate	Optimized for aqueous liquids, very low nonspecific binding
0.1 µm	Polyethersulfone	Very low protein binding and low extractables, fast flow rate

Bottle-Top Filters

The filter adapter is available with a 45 mm thread finish, and is designed to ensure a vacuum-tight seal on customer-supplied bottles with the appropriate thread finish. Each filter unit also contains a tubing adapter that will fit most vacuum hoses.

Chemical Compatibility

The mechanical strength, color, appearance, and dimensional stability of filter systems, bottle-top filters and plastic bottles are affected to varying degrees by the chemicals with which they come in contact. Specific operating conditions, especially temperature, will also affect their chemical resistance. A table is provided to serve as a general guideline for the chemical resistance of Sartolab® single-use sterile filters and bottles.

Chemical Resistance of Sartolab® Filters

Chemical Class	Membrane (PES)	Membrane (CA)	Housing (PS)
Weak Acids	3	2	1
Strong Acids	3	2	2
Alcohols	2	2	2
Aldehydes	3	3	3
Aliphatic Amines	1	3	3
Aromatic Amines	3	3	3
Bases	3	3	1
Esters	3	3	3
Hydrocarbons	3	2	3
Ketones	3	3	3

Key: 1. recommended

2. may be suitable for some applications; a trial run is recommended

3. not recommended. PS, polystyrene; PES, polyethersulfone; CA, cellulose acetate.

■ Sartoclear Dynamics® Lab P15

Clarification and Sterile Filtration of up to 15 mL Mammalian Cell Culture in One Step

Sartoclear Dynamics® Lab P15 is a new kit for single step harvesting of 15 mL animal cell cultures with even high cell densities. With this kit, the clarification and sterile filtration of mammalian cell culture is performed in a single pressure filtration step. Inspired by the plasma industry, Sartoclear Dynamics® is based on the principles of body feed filtration.

This ready to use kit combines a 20 mL syringe pre-filled with a 0.5 g filter aid and an integrated filter* for sterile filtration. The filter aid facilitates filtration through the sterile filter while allowing complete protein recovery.

A convenient filling tube can be connected to the syringe, for the easy recovery of samples from 50 mL Falcon tubes or ambr 15 bioreactors.

As a result, this method replaces centrifugation and subsequent sterile filtration steps, leading to clarified and sterilized cell culture harvest in minutes. Your cell culture harvest will be available for following sample concentration by ultrafiltration and downstream analytics in no time.

Sartoclear® Dynamics Lab P15 Features:

- Single step mammalian cell culture harvest
- Designed for cell densities up to 20×10^6 cells and even more
- Fast and effortless filtration
- Optimized for cell culture harvest from ambr® 15 bioreactors

* The sterile filter included in the kit contains a 0.2 µm polyethersulfone membrane and a prefilter made of 100 % high-purity quartz: The choice of these materials, along with the larger surface area of the filter, enables higher flow rates.

■ Quick and Easy Filtration

1. Fill the syringe with cell culture broth.

2. Shake the syringe to mix the broth with the filter aid.

3. Connect the sterile filter to the syringe and filter.

Typical Results

Cell Type	Cell Density	Viabi- lity	Mab concentration before filtration	Mab concentration after filtration	Recovery Rate
CHO DG44	16×10^6 cells/mL	78%	6.02 g/L	5.77 g/L	96%
CHO DG44	38×10^5 cells/mL	48%	0.43 g/L	0.43 g/L	100%

□ Specifications

DE Syringe

Syringe material	Syringe barrel and plunger rod: polypropylene; stopper: latex-free elastomer
Syringe Cap	Polyamide
Filling tube material	Polypropylene
Filter aid	0.5 g highly pure diatomaceous earth (Celpure® C300 – pharmaceutical-grade*)

Sterile Filter

Housing material	Polycarbonate
Prefilter material	100% high-purity quartz, binder-free
Filter material	0.2 µm polyethersulfone
Filter diameter	61 mm
Filtration area	20 cm ²
Connector inlet	Female luer lock
Connector outlet	Hose barb
Hold-up volume	Approx. 3 mL
Housing burst pressure	> 5 bar 72.5 psi
Packaging	Individually packed
Sterilization	EO sterilization

□ Ordering Information

■ Sartoclear Dynamics® Lab V

Clarification and Sterile Filtration of 50 mL up to 1 L Mammalian Cell Culture in One Step

Sartoclear Dynamics® Lab V kits enable clarification and sterile filtration to be performed in a single step. These kits simplify the cell harvesting process by fully eliminating the centrifugation step otherwise needed for clarification. As a result, they enable cell cultures to be efficiently clarified and sterilized in minutes – quickly and easily.

Sartoclear Dynamics® Lab kits have been designed and optimized for harvesting mammalian cell cultures, such as CHO, HEK, hybridomas and many others, with cell densities of up to 20×10^6 cells/mL.

Each kit provides filter aid pouches for clarification and Sartolab® RF vacuum filtration units for sterile filtration. The filter aid used in Sartoclear Dynamics® Lab products is made of highly-pure diatomaceous earth (DE) that is insoluble and inert. It is packed in ready-to-use pouches in pre-wetted condition to prevent the release of dust particles. The DE pouches are gamma-irradiated to rule out any contamination.

Sartoclear® Dynamics Lab V Features:

- Single step mammalian cell culture harvest
- Designed for cell densities up to 20×10^6 cells
- Fast and effortless filtration

■ Quick and Easy Filtration

1. Attach the Sartolab® RF unit to a vacuum source. Pour the filter aid into your cell culture.

2. Mix to homogenize. Pour the cell culture and filter aid mixture into the Sartolab® RF first ...

3. ... then filter by simply starting the pump.

4. After 5–15 min, the sample will be available for subsequent downstream processing steps, such as protein purification and concentration.

Typical Results

Cell Type	Cell Density	Viability	mAb concentration before filtration	Mab concentration after filtration	Recovery Rate	Turbidity
CHO	14.46×10^6 cells/mL	85.2%	5.2 g/L	5.15 g/L	99%	18 NTU
HEK	8×10^6 cells/mL	70%	0.035 g/L	0.034 g/L	97%	8 NTU

□ Specifications

Pouches of Filter Aid

Diatomaceous Earth (DE)	1 g, 5 g or 10 g highly pure diatomaceous earth, (Celpure® C300 – pharmaceutical grade)*, mixed with water in a ratio of 1 DE: 1.25 ultrapure water
Packaging Sterilization	Dust-free, gamma irradiated pouches

Vacuum Filtration Units – Sartolab® RF

Funnel, dust cover, receiver bottles	Heavy metal-free polystyrene
Filter adapter, tubing adapter, cap	Heavy metal-free polyethylene
Filter material	0.22 µm polyethersulfone
Packaging Sterilization	Single-packaged, sterile

* Celpure® is a trademark of Advanced Minerals

Each Sartoclear Dynamics® Lab V kit is comprised of pouches of filter aid and Sartolab® RF vacuum filtration units that match your needs. Find the right kit in just two easy steps:

1. Determine the volume range of your sample to be filtered.
2. Then reference it to the cell density of your cell culture.

Volume*	Cell density**		
	< 5 million cells/mL	5–10 million cells/mL	10–20 million cells/mL
50–150 mL	SDLV-0150-02C--E		SDLV-0150-05C--2
150–250 mL	SDLV-0250-05C--2		SDLV-0250-10C--2
250–500 mL	SDLV-0500-05C--2	SDLV-0500-10C--2	SDLV-0500-20C--E
500–1000 mL	SDLV-1000-10C--2	SDLV-1000-20C--E	SDLV-1000-40C--E

* Especially for cultures with high cell densities (>10 million cells/mL), we recommend that you use a Sartolab® RF unit nominally rated for the next higher volume of the solution to be filtered as it will accelerate your filtration run (larger membrane surface area | higher quantity of DE).

** Tested with CHO cell lines with a cell viability of approx. 85%

¹ Gamma irradiation feasible for Minisart® Air

Contact time: 24 hours at 20°C. Chemical compatibilities can be influenced by various factors. Therefore, we recommend that you confirm compatibility with the liquid you want to filter by performing a trial filtration run before you start your actual filtration.

Basic Filtration

Table of Contents

- 114 Filter Papers
- 118 Glass and Quartz Microfiber Filters
- 122 Membrane Filters
- 130 Blotting | Chromatography Papers & Blotting Membranes
- 132 Filtration Equipment
- 142 Combisart® Manifolds

Filters are indispensable for your routine work in laboratory and industrial applications. Sartorius supplies you with a broad range of filters for a myriad of filtration tasks and supports you with all your filtration challenges.

Our Product Range Covers:

- Filter papers
- Glass and quartz microfiber filters
- Membrane filters
- Blotting & chromatography papers & membranes
- Filtration equipment

Quality Assurance and Quality Control

Sartorius pays particular attention to continuous in-process quality control. Regular checks and exact analyses of the raw materials and each finished product assure constant high quality and product uniformity. We meet the requirements set forth by the ISO 9001 quality management system and the ISO 14001 environmental management system.

How Do Filter Papers Work?

Filter papers are depth filters. Their efficiency is influenced by various parameters: the mechanical particulate retention, adsorption, pH, surface properties, thickness and strength of the filter paper as well as the shape, density and quantity of particles to be retained. The precipitates deposited on the filter form a "cake layer" which – depending on its density – increasingly affects the progress of an ongoing filtration and decisively affects the retention capability. Therefore, it is essential to select the perfect filter paper to ensure the best filtration results. This choice depends on the filtration method as well as on the amount and properties of the medium to be filtered, the size of the particulate solids to be removed and the required degree of clarification.

How Do Membrane Filters Work?

Membrane filters retain particles larger than their pore sizes. Smaller particles pass through the membrane or are captured in the membrane. Such filters are used for the filtration of smaller particles and for critical applications such as sterility testing. The choice of the right membrane type depends on the specifications of the solution to be filtered. The most important parameters for this are adsorption, chemical compatibility and the particle size to be retained.

Ash-free Filter Papers

For Quantitative and Gravimetric Analyses

These filter papers are used for quantitative and gravimetric analyses as well as for pressure or vacuum filtration. They are made out of 100% cotton linters with an α -cellulose content of >98% and are acid-washed to make the papers ashless and achieve high purity.

Specifications

Grade	Weight (g/m ²)	Thickness (mm)	Particle Retention (μm)	Filtration (s)	Precipitates	Properties

Wet-strengthened Filter Papers

For Qualitative Analyses

These qualitative filter papers are essentially used for analytical purposes and routine analyses, whenever no gravimetric analyses are required. They are wet-strengthened and can be used for pressure and vacuum filtration. They are made of refined pulp and linters with an >95% α -cellulose content and are very pure with an ash content $\leq 0.1\%$.

Specifications

■ High-Purity Filter Papers

For Qualitative Analyses

These paper grades are used for analytical purposes that require a low ash content. Grades 292 and 292a are especially suitable for soil analyses because they are low in nitrogen. For phosphate or sodium determination, we recommend grades 131 and 132.

□ Specifications

Grade	Weight (g/m ²)	Thickness (mm)	Particle Retention (µm)	Filtration (s)	Material
292	87	0.18	5 to 8	45	Cotton linters, low-nitrogen and nitrates, ash content ≤ 0.06% according to DIN 54370
292a	97	0.19	4 to 7	60	Cotton linters, low-nitrogen and nitrates, ash content ≤ 0.06% according to DIN 54370
132	80	0.17	5 to 7	55	Cotton linters and refined pulp, low-phosphate and low-potassium, ash content < 0.02% according to DIN 54370
131	80	0.16	3 to 5	100	Cotton linters and refined pulp, low-phosphate and low-potassium, ash content < 0.02% according to DIN 54370

Filter Papers

For Qualitative-Technical Analyses

These filter papers are used for routine analyses like clarification, determination of substances, but also as discs with a center hole for technical applications. Grades with a wet burst resistance > 30 kPa are referred to as wet-strengthened and are therefore suitable for pressure or vacuum filtration. They are made of refined pulp and linters with an > 95% α -cellulose content, are very pure with an ash content between <0.1 to 0.15%. Below you will find an overview of the most commonly used grades.

Specifications

Grade	Surface	Weight (g/m ²)	Thickness (mm)	Particle Retention (μm)	Filtration (s)	Wet Burst Resistance (kPa)	Properties
3 hw	Smooth	65	0.14	8 to 12	20	40	Medium fast filtering, filter paper for routine work in the lab
4 b	Smooth	75	0.15	8 to 12	22	> 15	Medium fast filtering, filtration of coarse precipitates, wick paper for seed testing
603/N	Crêped	75	0.25	> 15	8	≥ 50	Fast filtering, filtration of sugar solutions
6	Smooth	80	0.17	10 to 13	15	30	Fast filtering, degassing beer before analysis, clarification of spirits
100/N	Smooth	85	0.18	6 to 8	30	80	Medium fast filtering, ash content <0.1%, low potassium and sodium content, determination of the sugar content
5 H/N	Crêped	85	0.28	> 40	3	≥ 40	Very fast filtering, wide-pore, filtration of essential oils
3 S/h	Smooth	200	0.36	5 to 7	55	15	Medium fast to slow filtering, narrow-pore, re-wet test for diapers

Glass Microfiber Filters

Without Binder

Binder-free glass microfiber filters are recommended for analytical and gravimetric analyses and also as prefilters. These filters combine fast flow rates with high load capacity and the retention of very fine

particles; they are biologically inert, are resistant to most chemicals and withstand temperatures up to 500°C (grade 550-HA up to 550°C).

Specifications

■ Glass Microfiber Filters

With Binder

These filters are mostly used either for monitoring air and gas or as a prefilter. They are manufactured with synthetic binding agents to ensure that the filter has a defined strength.

They are mechanically and chemically stable, have a temperature resistance up to 180°C and – depending on the binding agent used – are either hydrophobic or hydrophilic.

□ Specifications

Quartz Microfiber Filters

The quartz microfiber material of the Sartorius pre-heated filters, grade Q3400, is made of high-purity quartz microfibers without any addition of glass microfibers or binding agents. In addition, the Q3400 filter grade is tempered to remove all chemically combined water and to give the filters

excellent weight and dimensional stability. Sartorius filters are especially suitable for emissions monitoring at temperatures of up to 900°C and wherever filters of the highest purity are needed.

Specifications

■ Membrane Filtration – Quick Selection Guide

Cellulose Nitrate (Mixed Cellulose Ester)

Cellulose nitrate membrane filters are indicated for many general laboratory applications where a membrane with a high non-specific adsorption is suitable. They are hydrophilic, have high flow rates thanks to their symmetric structure and are compatible with aqueous solutions

(pH 4 to 8), hydrocarbons and several other organic solvents. The cellulose nitrate membranes are available in different pore sizes from 0.2 µm to 8 µm.

Specifications

Cellulose Acetate

Cellulose acetate membranes combine high flow rates and thermal stability with very low adsorption characteristics, and are therefore excellently suited for use in pressure filtration devices. They are hydrophilic, have high flow rates thanks to their symmetric structure and are compatible with aqueous solutions

(pH 4-8), oils, alcohols and other organic solvents. The 0.2 µm membrane is the filter of choice for sterile filtration of aqueous solutions, such as nutrient media, buffers and sera. The cellulose acetate membranes are available in different pore sizes from 0.2 to 5 µm.

■ Regenerated Cellulose

The very low adsorption membranes are hydrophilic, solvent-resistant (pH 3-12) and therefore suited for the particle removal from solvents. The membrane is reinforced with nonwoven cellulose. They are available in two pore sizes: 0.45 µm and 0.2 µm.

■ Polyethersulfone

Polyethersulfone (PES) membrane filters are hydrophilic, have high flow rates, a low non-specific protein adsorption and are chemically resistant over a pH range of 1 – 14. They are therefore recommended

for the filtration of aqueous solutions as well for protein filtration. Furthermore, the low level of extractables makes them suitable for environmental analysis.

■ Polyamide

Polyamide membrane filters are hydrophilic and chemically resistant to alkaline solutions and organic solvents. They are therefore recommended for the particle removal from aqueous solutions and

solvents for analytical determination such as HPLC, for the sterile filtration of these liquids as well as for applications where a membrane with a relatively high non-specific adsorption is suitable.

Hydrophobic PTFE

The main application of these membrane filters is the filtration of air, gases or chemicals. They are made of PTFE (polytetra-fluorethylene) only and are therefore permanently hydrophobic. Unlike other (hydrophilic) filter types, they are not wetted by air humidity, allowing unhindered passage of air at low differential pressures as well. PTFE

membrane filters have an excellent chemical compatibility (pH 1 to 14), so that they are also used for the filtration of solvents and acids, to which other filter types are not resistant. Due to their hydrophobic characteristics, they must be pre-wetted with ethanol or methanol before the filtration of aqueous media.

■ Polycarbonate Track-Etched

Those white and hydrophilic polycarbonate track-etched membranes are manufactured from high grade polycarbonate film using track-etch technology. Their capillary pore structure is uniform and precise, with a narrow pore size distribution to retain particles on their surface. Track-etched membranes are an excellent choice for accurate fractionation of particulates because of their precise pore size.

Track-etch technology offers the user distinct performance advantages when excellent surface capture and high sample visibility are required. Their main applications are particulate analysis, epifluorescence microscopy, fluid clarification, cytology, cell biology, bioassays, water microbiology and environmental analysis.

■ Nitrocellulose Membrane for Blotting

Sartorius nitrocellulose membranes are available in two pore sizes, 0.22 µm and 0.45 µm. Both versions combine the advantages of high protein binding capacity with low background and high membrane stability, which ensures easy handling. Due to its large surface area, the 0.22 µm

membrane version is recommended for small proteins. Sartorius blotting membranes are ideal for western blotting, DNA blotting as well as dot or slot blots. They have been optimized for all protein blotting systems, such as electrotransfer, semi-dry or simple capillary blotting.

□ Specifications

	0.22 µm	0.45 µm

■ Re-usable, 13 mm Syringe Filter Holders

For the Ultracleaning of Small Volumes Up to About 10 mL

PTFE Holder for Solvents and Chemicals

Made completely of PTFE, this holder is unaffected by chemicals and contains no trace elements which could be released into the liquid being filtered. It is therefore extremely well suited for particle removal from samples and reagents for analytical methods, such as NMR samples. Other

benefits of this application are the low hold-up volume, the easy cleaning and the drying at a temperature of 180°C. The construction of the holder ensures leak proof sealing without a sealing ring, and avoids twisting of the membrane filter when the top is tightened onto the base.

Specifications

Connectors	Female Luer Lock inlet, luer slip outlet
Chemical compatibility	As for PTFE
Filtration area	0.5 cm ²
Materials	PTFE top and bottom parts
Max. operating pressure	5 bar 500 kPa 72.5 psi
Membrane filter diameter	13 mm
Sterilization	By autoclaving (max. 134°C) or by dry heat (max. 180°C)
Hold-up volume	Less than 0.03 mL after overcoming the bubble point (0.3 mL before)

Ordering Information

Description	Order No.
13 mm PTFE Syringe Filter Holder	16574

Polycarbonate Holder for Aqueous Solutions

This inexpensive filter holder is made of clear, autoclavable polycarbonate. The silicone gasket enables a leak-free

filtration at pressures of up to 7 bar by simply screwing it together manually. Filter supports in the top and bottom parts allow filtration in either direction.

Specifications

Connectors	Female Luer Lock inlet, luer slip outlet
Chemical compatibility	As for polycarbonate and silicone
Filtration area	0.5 cm ²
Materials	Polycarbonate top and bottom part, silicone gasket
Max. operating pressure	7 bar 700 kPa 101.5 psi
Membrane filter diameter	13 mm
Sterilization	By autoclaving at 121°C
Hold-up volume	Less than 0.2 mL after overcoming the bubble point (0.3 mL before)

Ordering Information

Description	Order No.
13 mm Polycarbonate Syringe Filter Holder, pack of 12	16514-----E
Silicon gasket, 10 × 14.9 × 0.5 mm, pack of 10	6980569

■ Re-usable 25 mm Syringe Filter Holders

For the Ultracleaning and Sterilizing Filtration of Volumes of Up to About 100 mL

Stainless Steel Holder for Solvents and Chemicals

Made of stainless steel, this holder is heat-resistant, and the chemical compatibility depends only on the inserted filter type.

The top part can easily be mounted on the bottom part using the enclosed tightening tool. Filter supports in the top and bottom parts allow filtration in either direction.

□ Specifications

Connectors	Female Luer Lock inlet, luer slip outlet
Chemical compatibility	As for stainless steel
Filtration area	3 cm ²
Materials	Stainless steel (1.4305) top and bottom parts
Max. operating pressure	7 bar 700 kPa 101.5 psi
Membrane filter diameter	25 mm
Sterilization	By autoclaving (max. 134°C) or by dry heat (max. 180°C)
Hold-up volume	Less than 0.1 mL after overcoming the bubble point (0.3 mL before)

□ Ordering Information

Description	Order No.
25 mm Stainless Steel Holder	16214
Tightening tool, Polyman 24/5	6980595

Polycarbonate Holder for Aqueous Solutions

This inexpensive filter holder is made of clear, autoclavable polycarbonate. The silicone gasket enables a leak-free filtration

at pressures of up to 7 bar by simply screwing it together manually. Filter supports in the top and bottom parts allow filtration in either direction.

□ Specifications

Connectors	Female Luer Lock inlet, luer slip outlet
Chemical compatibility	As for polycarbonate and silicone
Filtration area	3 cm ²
Materials	Polycarbonate top and bottom parts, silicone gasket
Max. operating pressure	7 bar 700 kPa 101.5 psi
Membrane filter diameter	25 mm
Sterilization	By autoclaving at 121°C
Hold-up volume	Less than 0.3 mL after overcoming the bubble point (0.6 mL before)

□ Ordering Information

Description	Order No.
25 mm Polycarbonate Syringe Filter Holder, pack of 12	16517-----E
Silicone gasket, 20.5×26.5×0.5 mm, pack of 10	6980570

25 mm Glass Vacuum Filter Holder

For Hybridization Tests, Particle Testing and Clarification

This filter holder is available in two versions differing from each other only in the type of the filter support. The filter with glass frit ensures uniform distribution of retained particles and is therefore recommended when the residue on the filter surface is of interest. Because it is easy to clean, the device with the PTFE-coated screen support is preferable when the filtrate is required, or when liquids difficult to remove from glass frits must be examined. The PTFE ring, which holds the

glass frit and the screen support, allows for the autoclaving of the devices with a filter in position and protects the edge of the glass frit from breakage and potential leakage. It has a rim around the upper edge to simplify the positioning of the membrane filter when inserted and a silicone O-ring in the underside for a leak-proof seal on the filtrate side. The funnel-shaped top part simplifies filling in the sample.

Specifications

Outlet spout	12 mm dia.
Parts and materials	Borosilicate glass funnel and base PTFE glass filter support (type 16306) or PTFE stainless steel filter support, coated with PTFE (type 16315) Silicone O-ring 25 x 3 mm Anodized Aluminium clamp
Chemical compatibility	As for glass, PTFE and silicone. The silicone O-ring can be replaced by a fluoroelastomer O-ring (order no. 00118)
Funnel capacity	30 mL
Filtration area	3 cm ²
Max. operating pressure	Only for vacuum
Suitable membrane filter diameter	25 mm (or 24 mm)
Sterilization	By autoclaving (max. 134°C) or by dry heat (max. 180°C)

Ordering Information

Description	Order No.
Glass vacuum filtration holder for 25 mm (or 24 mm) membrane filter, with glass frit filter support	16306
Glass vacuum filtration holder for 25 mm (or 24 mm) membrane filter, with PTFE-coated screen filter support	16315

Replacement parts are shown in the diagram.

50 mm Glass Vacuum Filter Holder

For Particle Testing or Clarification and Sterile Filtration

This filter holder is available in two versions differing from each other only in the type of the filter support. The device with glass frit ensures uniform distribution of retained particles and is therefore recommended, when the residue on the filter surface is of interest. Because it is easy to clean, the device with the PTFE-coated screen support is preferable when the filtrate is required, or when liquids difficult to remove from

glass frits must be examined. The PTFE ring, which holds the glass frit and the screen support, allows the autoclaving of the devices with a filter in position and protects the edge of the glass frit from breakage and potential leakage. It has a rim around the upper edge to simplify the positioning of the membrane filter when inserted and a silicone O-ring in the underside for a leak-proof seal on the filtrate side.

Specifications

Outlet spouts	15 mm dia.
Parts and materials	Borosilicate glass funnel and base Silicone caoutchouc lid PTFE glass filter support (type 16307) or PTFE stainless steel filter support, coated with PTFE (type 16316) Silicone O-ring 45 x 3 mm Anodized Aluminium clamp
Chemical compatibility	As for glass, PTFE and silicone. The silicone O-ring can be replaced by a fluoroelastomer O-ring (order no. 00124).
Funnel capacity	250 mL
Filtration area	12.5 cm ²
Max. operating pressure	Only for vacuum
Suitable membrane filter diameter	50 mm (or 47 mm)
Sterilization	By autoclaving (max. 134°C) or by dry heat (max. 180°C)

Ordering Information

Glass vacuum filtration holder for 50 mm (or 47 mm) membrane filter, with glass frit filter support	16307
Glass vacuum filtration holder for 50 mm (or 47 mm) membrane filter, with PTFE-coated screen filter support	16316

Replacement parts are shown in the diagram.

■ All-Glass Vacuum Filter Holder

For Analytical Determinations, Particle Removal from Solvents

All areas, where liquid and device can come into direct contact, are made of glass or PTFE. The device, in combination with solvent-resistant, hydrophilic RC-membranes, is therefore ideal for ultracleaning and degassing solvents and solvent mixtures for HPLC, GC and AA. Convenience of handling is ensured by several beneficial features. A 6 mm wide

non-ground rim above the ground glass neck of the suction flask prevents the filtrate from contacting grease on the ground glass surface and so avoids its contamination while being poured out of the flask. The hose nipple connector is made of polypropylene for safe connection of the vacuum hose. The filtrate outlet spout ends well below the entrance to this hose nipple.

□ Specifications

Parts and materials

Borosilicate glass funnel, base and flask, sintered glass frit in a PTFE ring and fluoroelastomer O-ring (45 x 3 mm) underneath, anodized aluminium clamp

Chemical compatibility

As for glass and PTFE

Funnel capacity

250 mL

Capacity of the filtrate flask

1 liter

Filtration area

12.5 cm²

Max. operating pressure

Only for vacuum

Suitable membrane filter diameter

50 mm (or 47 mm), 40 or 42 mm prefilter

Sterilization (without connector)

By autoclaving (max. 134°C) or by dry heat (max. 180°C)

□ Ordering Information

Description

Order No.

All-glass vacuum filter holder
for 50 mm (or 47 mm) membrane filter,
with vacuum-resistant flask, capacity 1 liter

16309

Replacement parts are shown in the diagram.

■ Polycarbonate In-Line Filter Holder

For the Filtration of Liter Volumes of Aqueous Solutions

This holder is made of stable, autoclavable polycarbonate. This practical holder is suitable for many simple laboratory filtrations. It can be connected to a peristaltic pump or a pressure container. The bell-shaped base protects the filtrate from repeated contamination while flowing in a receiver. The holder is characterized

by an excellent resistance to pressure and density setting by simple hand-tightening. The transparent top part allows the visual control of the correct fit of the O-ring. The hose nipples can be replaced by luer connectors to use it as a large area syringe filter holder.

□ Specifications

Chemical compatibility	As for polycarbonate, polypropylene and silicone
Filtration area	12.5 cm ²
Weight	83 g
Threads for connectors	M 12 × 1 female thread
Materials	Polycarbonate top part, base part and hose nipple, polypropylene filter support, silicone O-ring (40 × 5 mm)
Max. operating pressure	7 bar 700 kPa 101.5 psi
Suitable membrane filter diameter	50 mm (40 or 42 mm prefilter)
Sterilization	By autoclaving at 121 °C The material withstands repeated cycles, provided aggressive cleaning agents are completely washed off and that the boiler water does not contain anti-corrosive or anti-scaling additives.

□ Ordering Information

Description	Order No.
Polycarbonate in-line filter holder for 50 mm membrane filter, pack of 5.	16508-----B

Replacement parts are shown in the diagram.

■ 25 mm Stainless Steel Filter Holder

For In-Line Filtration

The G1/4 connection threads with density barrel, guarantee leak-proof sealing of the hose nipple and the holder without sealing rings. Other connectors, available as accessories, fit the holder onto reducing

valves or pumps with G1/4 female thread (order no. 01030) or G3/8 female thread (order no. 01029) or onto pressure tanks with G3/8 male thread (order no. 00177).

□ Specifications

Connectors	Hose nipples DN10
Filtration area	3 cm ²
Weight	ca. 170 g
Materials	Stainless steel, except silicone O-ring (21×2 mm) and aluminium closing ring
Max. operating pressure	5 bar 500 kPa 72.5 psi
Suitable membrane filter	25 mm (20 mm prefilter for the filtration of liquids only)
Sterilization	By autoclaving (max. 134°C) or by dry heat (max. 180°C)

□ Ordering Information

Description	Order No.
Stainless steel pressure filter holder for 25 mm dia. membrane filter.	16251

Replacement parts are shown in the diagram.

47 mm Stainless Steel Filter Holder

For In-Line Filtration

Diagram for 16254

The filter holder is suitable for a pressure of up to 20 bar. The inlet side valve is convenient for the intermittent run-off of waste water. Other connectors, available as accessories, fit the holder onto reducing

valves or pumps with G $\frac{3}{8}$ female thread (order no. 17089) or onto pressure tanks with G $\frac{3}{8}$ male thread (order no. 17069) or on taps with G $\frac{3}{4}$ male thread (order no. 17068).

Specifications

Connectors	Hose nipples DN10
Connection thread	M12 x 1
Filtration area	13 cm ²
Weight	ca. 490 g
Materials	Stainless steel, except silicone O-ring (42 x 3 mm), PTFE and fluoroelastomer valve seals
Max. operating pressure	20 bar 2,000 kPa 290 psi
Suitable membrane filter	47 mm (40 or 42 mm prefilter)
Sterilization	By autoclaving (max. 134°C) or by dry heat (max. 180°C)

Ordering Information

Description	Order No.
Stainless steel filter holder for 47 mm membrane filter (with adapter M12 x 1 male thread to hose barb DN10, Mat. 316, ref. 6980801) – Replacement parts are shown in the diagram	16254
Stainless steel filter holder for 47 mm membrane filter (with adapter M12 x 1 male thread to hose barb DN 4 to 5, Mat. 316, ref. 6981132)	16278
Stainless steel back pressure screen	6980721----1
Stainless steel filter support screen	6980180----1
Stainless steel underdrain screen	00181
Stainless steel connector M12 x 1 male thread to hose barb DN 4-5	6981132
Adapter Quick connect nipple length 60 mm male part to male thread M12 x 1, Mat 316	17090----1

■ Stainless Steel Pressure Filter Holder

For the Filtration of Up to 5 Liter Volumes

A practical filter holder for many laboratory filtrations. It can be attached to a tripod with the help of a steel rod which can be screwed in. The hose nipple is screwed into the side of the top part, leaving room for a large filling opening. This makes pouring in the sample easier, and the sample can be refilled without removing the tube connection to the pressure source. Leak-proof sealing is achieved by

hand-tightening the closing ring. For the filtration of small volumes (up to about 200 ml of soil samples or viscous liquids, such as oils), the holder is connected directly to a pressure source. For the filtration of up to 5 liter volumes of relatively easily filterable liquids (e.g. buffer solutions, solutions for cell counters and tissue culture solutions), it is used in combination with a pressure tank.

□ Specifications

Chemical compatibility

As for stainless steel, PTFE and silicone. If required, the silicone O-ring in the filter support can be replaced by a fluoroelastomer O-ring 00179 or a PTFE O-ring 17038 (by reducing the max. operating pressure to 4 bar | 58 psi); the silicone O-ring in the top part can be replaced by a fluoroelastomer O-ring 17145.

Filtration area

13 cm²

Weight

960 g

Threads for connectors

M 12 x 1 female thread

Materials

Top part, barrel, base part, corrugated iron, closing ring, closure cap, back pressure screen and stainless steel hose nipples 1.4401 (AISI 316), PTFE-coated stainless steel filter support, silicone O-rings, 41 x 2 mm (top part) and 42 x 3 mm (filter support), PTFE-sealing (cap).

Max. operating pressure

10 bar | 1,000 kPa | 145 psi

Suitable membrane filter diameter

47 mm (40 or 42 mm prefilter)

Sterilization

By autoclaving (max 134°C) or by dry heat (180°C)

17145

Other replacement parts are shown in the diagram or on page 139.

Chemical-resistant PTFE Filter Holder

For the Filtration of Aggressive Liquids

The holder hinders the release of trace elements into the filtrate and is resistant to almost all chemicals. The fluoroelastomer O-ring in the top part allows easy hand tightening, and can be replaced by a PTFE

O-ring, order no. 17039. The 6 mm outlet nipple is an integral part of the base, the 10 mm inlet hose nipple can be replaced by a G $\frac{3}{8}$ connector, order no. 17051.

Specifications

Chemical compatibility	As for PTFE and fluoroelastomer
Filtration area	12.5 cm ²
Thread for inlet connector	M 14 x 1.5 male thread
Materials	Top part, barrel, base part: corrugated iron, hose nipples and filter support with 40 x 3.5 mm O-ring: PTFE, locking rings: aluminium 39 x 3.5 mm fluoroelastomer O-ring (top part)
Max. operating pressure	5 bar 500 kPa 72.5 psi
Suitable membrane filter diameter	47 mm
Sterilization	By autoclaving (max 134°C) or by dry heat (180°C)

Combisart® Manifolds

1-, 3- and 6-Branch

Made of high-grade stainless steel (B.S. 304S3 | AISI 304); accommodates any type of vacuum funnel. Stainless steel three-way valves (taps) allow the vacuum for each filter holder to be individually

controlled and each holder to be steriley vented. The low height of the manifold ports is particularly advantageous for working on a clean bench.

■ Glass Filter Holders; 30, 250 mL

For Particle Counting

Glass Filter Holders

Two compact vacuum filter holders for easy particulate analysis. Both the top and bottom part of the filter holders are easily and securely fastened together using the

metal clamp. The centering rim on the filter support ensures correct positioning of the membrane filter. The glass frit filter support guarantees uniform distribution of retained particles on the filter surface.

Ordering Information

Description	Order No.
Glass filter holder 30 mL	16306
